RFD

FACT SHEET MB006

Established in 1920, RFD has a worldwide reputation for outstanding service in the field of Aerospace and Marine Safety and Survival Equipment. With a vast distribution network, RFD guarantees top-quality products to all its customers in both the civil and military sectors.

Military customers demand product excellence and RFD have always produced to the highest specifications. RFD Single Seat Liferrafts are used by armed forces worldwide - in an emergency situation, only the best will do.

RFD's comprehensive range of Single Seat Liferrafts are designed to provide Aircrew and Submarine Survivors with personal flotation, insulation and protection against the extreme elements of the world's roughest seas and oceans.

View the table below to choose the personal liferaft that best suits your needs.

SLMk31	Various weights for different models	Single/Double skin canopy & floor. Half-inflated floor. Spray visor. Various options available.	4220-99-766-9601

TYPICAL LIFERAFT DIMENSIONS:

Height - 820mm

Length - 1570mm

Width (at widest point) - 980mm

There are many different options available when buying a Single Seat Liferaft:- Foot-end Extensions, Balers, Retro-Reflective Strip and other ancillary items. The illustrations opposite show the most popular models available in our Single Seater range - the double skin canopy and floor are inflated orally to provide insulation for the survivor from low sea temperatures. The buoyancy is inflated from a carbon dioxide gas cylinder.

All RFD Single Seaters are boat-shaped and designed to accommodate one man. The liferafts are manufactured from Polyurethane (PU)-coated nylon fabric using High Frequency welding - this type of fabric and construction produces the lowest liferaft weight and bulk when packed into a PSP (Personal Survival Pack).

The RFD Single Seat Liferaft range offers you all the protection you will ever need.
